

INTER-ROW PLANT LEVER

Fast without difficulty!

Our plant lever is very fast clamp for different diameters. The machine is settled to the tractor lift with lateral piston in to the left arm in order to adjust the height. The clamp has double piston that extracts up the plant without breaking the roots and leaves a hole ready for the next new plant.

Its special frame requires a two-way double effect distributor to allow lateral movement.

- Fast lever
- Inter-row
- Hydraulic, good for different size of plant
- Doesn't break the roots
- Control by joystick
- New hole ready for next plant.
